Application No.: 10/715,965 Docket No.: SPINE 3.0-452 CONT

REMARKS

present communication is in response Official Action mailed December 7, 2007. In that Action, Examiner rejected claims 1, 4-10, 20, 21, 23, 26, 29, and 30 (each of the currently pending claims) under 35 U.S.C. § 103(a) U.S. being obvious over the combination of as et al. ("Kohrs) U.S. No. 6,855,166 to Kohrs and Patent No. 6,607,558 to Kuras ("Kuras").

rejections were set forth subsequent to Amendment of September 26, 2007 in which Applicants submitted to overcome amendments and arguments in order anticipatory rejections of the claims solely in view of Kohrs. In short, Applicants added the limitations that the upper and lower surfaces of the intervertebral spacer device be convexly curved along both a plane extending between the leading and trailing ends and a plane extending between the first and second In the present action, the Examiner admits that the sides. Kohrs reference does not teach such a limitation. However, the Examiner has cited Kuras as teaching precisely what Kohrs does not, and simply noted that one of ordinary skill in the art at the time of the present invention would have combined the teachings of the Kohrs and Kuras references in order to arrive at the present invention. Applicants respectfully disagree with the Examiner's contentions.

First, Applicants respectfully submit that the Examiner's indication that Kohrs and Kuras reside "in a similar art," is a somewhat overbroad. Where the Kohrs reference does in fact relate to a fusion device similar to that of the present invention, Kuras discloses an artificial disc that is meant to replicate the operation of a spinal disc when implanted between two adjacent vertebrae. While the two references are indeed within the spinal area, fusion devices and articulable devices are very different from one another. As such, Applicants

Application No.: 10/715,965 Docket No.: SPINE 3.0-452 CONT

respectfully submit that one of ordinary skill in the art would not have necessarily looked to the Kuras reference in order to modify Kohrs in accordance with what is claimed in the currently pending claims.

Second, Applicants respectfully point out that the aim of the Kohrs teaching was to create an intervertebral fusion implant with a reduced contact area. As explained in Kohrs, this reduced contact area allows the fusion device taught therein to be implanted between adjacent vertebrae (most likely within a channel or other area formed during the surgical of the implant minimal amount with a contacting the adjacent vertebral bodies. This allows better bone growth to occur between the adjacent vertebral bodies and the overall stability of the fusion to therefore be On the other hand, Kuras looks to replicate the improved. removed spinal disc through artificial means. Very little (if any) preparation of the vertebral bodies is required prior to implanting the device, and bone growth between the adjacent vertebrae is not desired given the intention of the implant to allow the movement of the vertebra with respect to one another. The multiple convex surfaces of the end plates of the implant taught in Kuras are meant to aid in the retainment of the device between the adjacent vertebral bodies. In fact, their shape is meant to allow for the most contact area to be had between the This would be contrary to implant and those vertebral bodies. Thus, this illustrates another reason the teachings of Kohrs. why one of ordinary skill in the art would not have looked to Kuras in order to modify Kohrs in order to arrive at the present invention.

In light of the above, Applicants respectfully submit Examiner's combination ο£ the Kohrs that the references is improper, in that the two references are non-Thus, Applicants respectfully submit that analogous.

Docket No.: SPINE 3.0-452 CONT

rejections of the currently pending claims are also improper. As such, Applicants respectfully request allowance of each and every one of the currently pending claims.

As it is believed that all of the rejections set forth in the Official Action have been fully met, favorable reconsideration and allowance are earnestly solicited. If, however, for any reason the Examiner does not believe that such action can be taken at this time, it is respectfully requested that he telephone Applicants' attorney at (908) 654-5000 in order to overcome any additional objections which he might have.

If there are any additional charges in connection with this requested amendment, the Examiner is authorized to charge Deposit Account No. 12-1095 therefor.

Dated: March 7, 2008

Respectfully submitted,

Kevin M. Kocun
